

Exceptional Data Solutions

Category Browser for Livelink

Highlights

- Simply "Mouse Over" item to display category data in a popup.
- Handles objects with multiple categories.
- If user has permission, an edit link allows the user to navigate to the Categories page to modify values.
- Categories won't display if pointer is quickly dragged over items.
- Works with the NCI Image Browser for Livelink to further enhance the user experience.

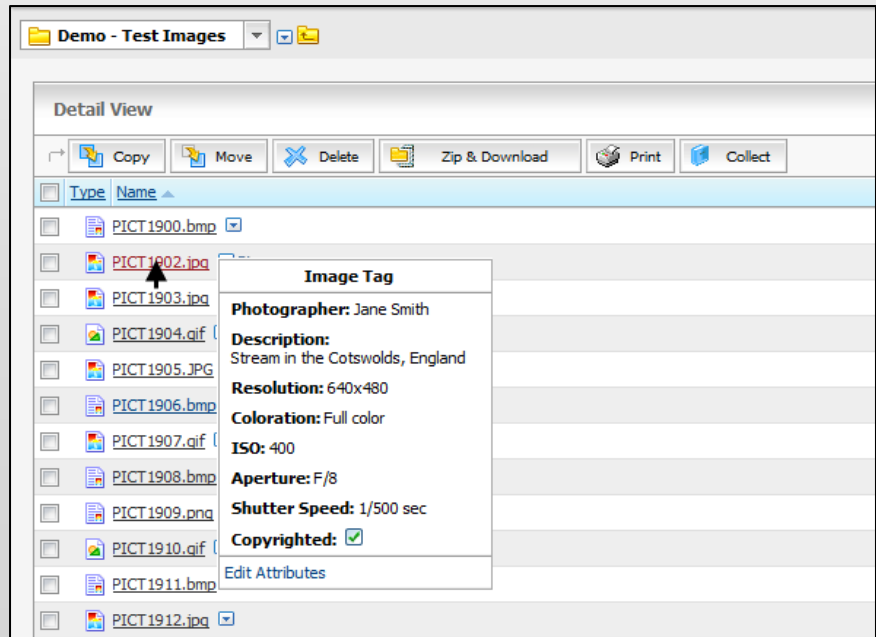

System Requirements

- Livelink 9.2 or higher

Would you like your users to visualize the power of Livelink Categories?

A powerful feature of Livelink is the ability to attach metadata to objects via Categories. However, viewing the Categories for multiple objects can be an arduous task when using the function menu Properties -> Categories feature. In most instances, usage of Categories is limited to searches and Live/Web Reports. Many of your users may not even know Categories exist!

To expose the power of Categories in Livelink, NCI has developed the Category Browser module which allows a user to view a Category by simply mousing over the object name. A pop-up window will display the metadata if that object has a Category. Thus, the user can quickly view the Categories of objects one by one without going through the Functions menu. It also handles objects with multiple Categories. In addition, an edit link allows the user to navigate to the Categories page if they wish to modify the values (with proper permission, of course!).

Exceptional Data Solutions

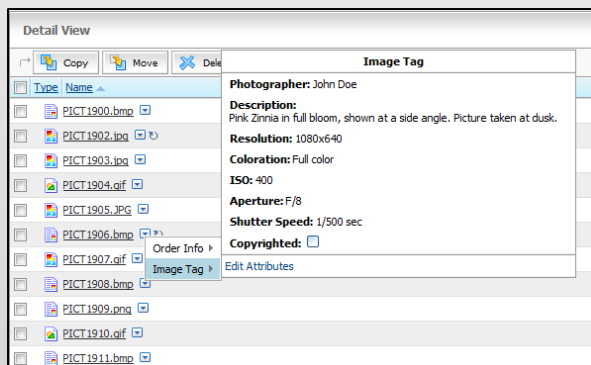

Category Browser for Livelink

Why should I get this module?

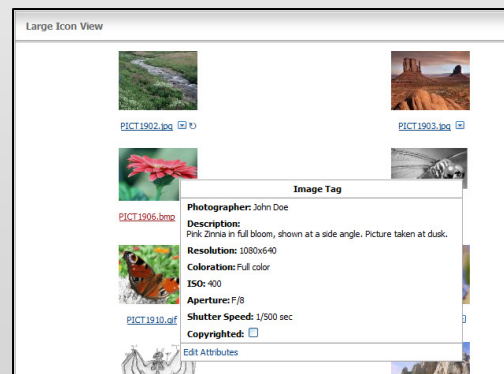

► Increase user adoption. Make the Livelink interface easier and more intuitive for your users and they will be more inclined to adopt your system.

► Fully leverage the power of Categories. Attaching metadata information to objects in your Livelink repository means having meaningful information that is more easily searchable. And if you make it easier for your users to view the Category information, they will be more inclined to input the metadata. They will more easily see and understand the benefits of using Categories.

► A great value. The Category Module is a focused enhancement. It addresses one specific area in Livelink - displaying Categories and Attributes, and is available to everyone in your Enterprise. You will find the price is a great value when compared to the benefits it provides your organization.

Multi-Category Display

With the Image Browser module

COMPANY INFORMATION

Nanavati Consulting, Inc. specializes in storing, moving, and displaying mission-critical data and documents so that you and your customers interact seamlessly. Whether the data are structured or unstructured, we help you consolidate and collaborate on information to make accurate decisions faster.

Our consulting expertise focuses on three major areas:

- Livelink Enterprise Content Management,
- Oracle database design, development and administration, and
- Information and System Security.

109 Longfellow Drive, Millersville, Maryland 21108
